

# Infographic: Paperless Apron Tracking

Sites around the country are being asked to prove apron QC on the spot.

**With the QC-Track Aprons module, it's easy!**

The **QC-Track Aprons** module is a complete intranet or cloud-based system for apron quality control (QC) and inventory tracking. With a browser on your network, your team can use secure QC Worksheets, QC Dashboards, QC Reports, QC Tags, and barcode scanning to track aprons across your facilities.

## Here's how it works:

### Attach QC Tags to Apron Items

**QC Tags** are available in two designs: plastic attachable and fabric adhesive. All tags have a unique tracking ID and barcode.

**Scanning** is done with a barcode scanner attached to your workstation.

Then a vinyl adhesive **annual QC indicator** is attached to show status at a glance.

### Record Inspections on QC Worksheets

**QC Worksheets** are used to log the inspection status of each apron. Users scan the barcode on the tag to bring up the worksheet, saving data entry time. Failures, out-of-service conditions, and pictures are logged and tracked. Worksheets are browser-accessed and can be customized.

### Get Email Notices When QC Is Due

QC-Track sends alerts via email when apron inspections are due or overdue, and dashboard notices are also triggered for due or overdue apron inspections. Apron departments can be on different QC schedules within a QC-Track installation.

### Prove Inspection History with Reports

**Reports** show Inspection Status, Apron Inspection History, Apron Search, and Inspection Statistics. Reports can be generated for a department or across departments. They can be generated as PDFs to print or email.

## Results and Benefits

- Meets CMS, TJC, and state tracking needs
- Simple and easy to use
- Easily fits into QC workflows
- Built-in email notices
- Centralized failure tracking
- At-a-glance management
- Easy access to QC records in remote locations
- Maximize your investment and upgrade options to a full QCIS™ across modalities

**Paper Can't Keep Up**

The QC-Track<sup>®</sup> Aprons module can handle tracking needs from single room facilities through multi-site multi-department hospital networks.

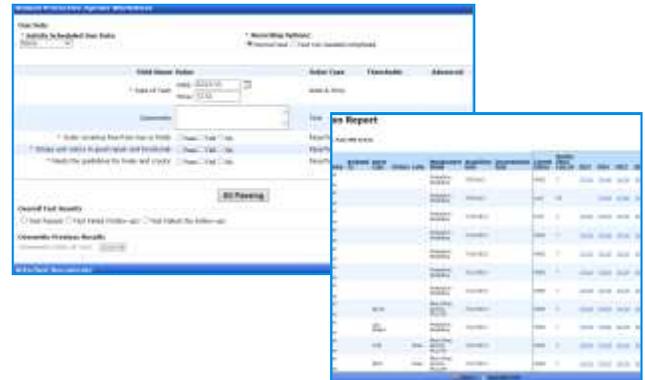

In the QC-Track Aprons module, items of PPE are tagged with a QC-Track.Aprons<sup>™</sup> Tag and associated with a Department. The Department Dashboard shows the QC status of any item of PPE in the department, sends email alerts when QC is coming due, and shows overdue QC situations. All data entered into the QC-Track Aprons module is stored in the QC-Track central QC database.

*The status of any apron in your system is just a few clicks away.*

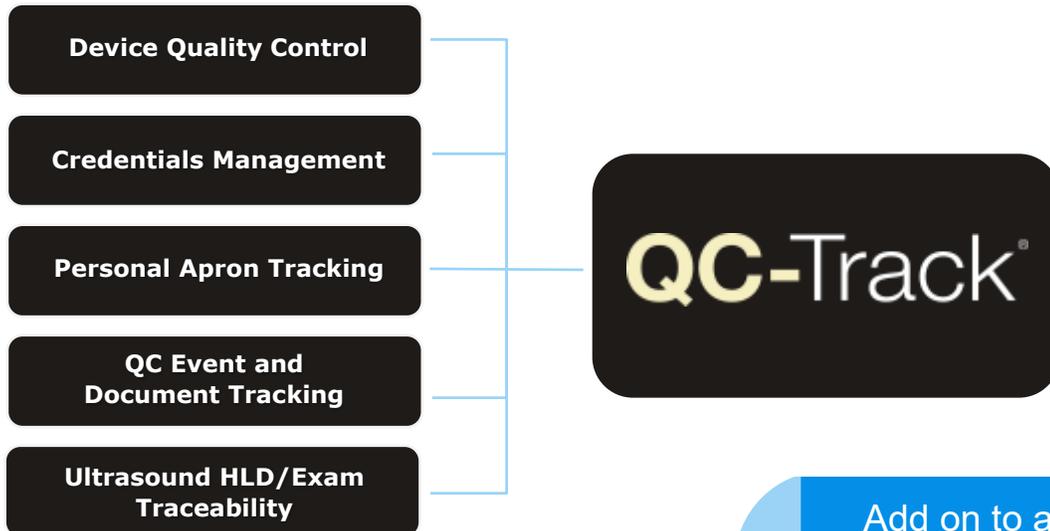

**Simplify Compliance**

The paperless QC-Track system simplifies compliance, accelerates QC workflows, and improves QC communications. The result?

**Always Inspection Ready<sup>™</sup>**

**QC-Track: Complete Paperless QCIS<sup>™</sup>**

**Add on to an Enterprise QCIS<sup>™</sup>**

QC-Track has been proven since 2008 in thousands of MQSA inspections. And QC-Track is more than MQSA. Modules are available across modalities. Whether it is ACR, TJC, DNV, AAPM, AIUM, or state requirements, your entire imaging quality team can be Always Inspection Ready<sup>™</sup>.
